**PRESS RELEASE: Motofix Group achieves Electric and Hybrid vehicle repair qualifications at all eight repair centres**

Motofix Group has gained the Institute of the Motor Industry's (IMI) HEV Level-3; a qualification designed to inform technicians how to work safely on electric and hybrid vehicles whilst carrying out diagnostic, testing and repair activities.

The standard set out by BS10125 requires each Bodyshop to have at least one person certified in this area. However, with the increasing presence of hybrid and electrically powered vehicles, the Group decided that all relevant staff should be trained to handle these vehicles to effectively manage the ever-growing number of electric and hybrid vehicles.

In addition to providing all relevant staff with this training, Motofix have incorporated dedicated electric and hybrid vehicle repair stations in all eight of their branches. These stations come equipped with specialised tools, along with Health & Safety information specific to the repair of energy efficient cars. All sites are also now fitted with approved charging points for customer convenience.

Sue Cripps, Group Standards and Compliance Manager, said *"Our goal is not just to meet the current requirements for industry compliance, but exceed them. As vehicles continue to use alternative energy sources, we need to ensure we cater to that change and offer the same exceptional experience to all our customers, whether they drive a petrol, diesel, electrical or hybrid vehicle."*

**Ends**

## Motofix Accident Repair Centres

Headquartered in Surrey, the Motofix Group is a leading vehicle body repair provider with eight specialist service delivery centres in the South and Southwest of England. Employing a skilled workforce of more than 250 people, the Group repairs over 18,000 vehicles annually and holds corporate compliance and service reputation as core brand values. Motofix is endorsed by 24 vehicle manufacturers, including some of the world's leading brands. All sites hold the prestige BSI Kitemark accreditation and selected sites now offer ADAS and structural aluminium repair capability.
