

PRESS RELEASE: Setting new standards - Motofix Group complete investment at High Wycombe

24 January 2020

Motofix are setting new standards with the completion of their High Wycombe accident repair centre refurbishment. Situated just off the M40, Motofix High Wycombe offers repair capacity for High Wycombe, Slough, Maidenhead, Uxbridge and outer West London areas and is approved by Audi, VW, Seat and Skoda. The site has been transformed with the introduction of new processes and equipment, with the refurbishment programme focusing on four key areas:

- **Expanding repair capability** with fitment of new state-of-the-art equipment, including Hunter 4 Wheel Alignment, ADAS systems, Aluminium and plastic welding repair, Electric and Hybrid HEV Level 3 stations, Blackhawk and Shark measuring systems.
- **Improved production efficiencies** by adopting electronic data to technicians, providing real time access to repair methods, updating of images through the repair cycle and fitment of company tool-boxes stations.
- **Reducing K2K times** by developing a dedicated fast-track repair line, with SMART repair tooling and rail-transfer systems manned by dedicated repair technicians.
- **Reducing carbon footprint** by adopting SWR waste management leading to a 99% reduction of waste to landfill, new Devilbiss spray guns and IDES LED lighting. (Following these initiatives, the company recently won Silver at the NBRA Greener Bodyshop Awards).

The project was led by Michael Beale, Group Technical Manager, who said *“we’re delighted with the results of our investment, with much of the improvements being carried out by our in-house building maintenance team. With employees living our brand values, the site has a real wow factor and we have already entertained visits from senior Innovation and VWG Group representatives.”*
